Fax: (727) 464 - 8201**

## INTRODUCTION

Floods can happen anywhere, anytime. Major storms, like hurricanes, are not the only causes of flooding. Most floods are too small or local to qualify for relief assistance. You do not have to live near water or in a flood zone to become flooded. In fact, approximately 30% of flood insurance claims come from areas outside of the 100-year floodplain and are designated as low-risk.

Not all insurance policies cover flood damages. Losses due to flooding **are not** covered under typical homeowner's and business owner's insurance policies. A separate insurance policy for flooding is needed. Flood insurance is available through the National Flood Insurance Program (NFIP) administered by the Federal Emergency Management Agency (FEMA). If you live in a community that participates in the NFIP, flood insurance is available. The NFIP, in conjunction with property or casualty insurance agents, brokers or with most of the country's major insurance companies and independent insurance agents, offers flood insurance to individuals and businesses located within NFIP participating communities throughout the United States. Flood insurance provides coverage for damages to structures, contents, flood-related erosion and other types of flood-caused damages. Whether you are a renter or own your home (including condominiums) or business, you can purchase flood insurance.

A community that participates in the NFIP must comply with FEMA's minimum standards for floodplain management. For those communities that do, the NFIP created the Community Rating System (CRS) program. The CRS is a voluntary program that recognizes community efforts that go above and beyond the minimum standards established in the NFIP by reducing flood insurance premiums for renters and property owners.

A community that chooses to participate in the Community Rating System determines which of the 18 public information and floodplain management activities to perform. Each participating community assigns a CRS Coordinator who is responsible for the CRS program application and to make sure that the community performs the activities chosen.

## PURPOSE

Many areas of Pinellas County can be considered low-lying or subject to flooding. Therefore, **unincorporated** Pinellas County and most of the communities within the County participate in the National Flood Insurance Program and the Community Rating System. This document was created to provide contacts within the jurisdictions who can answer questions regarding flooding, the CRS program, flood and evacuation zones, flood hazards, and flood protection. In addition, these people can increase your awareness of the hazards of flooding, mitigating the effects from flooding and flood damage, and to assist with flood protection.

The following directories identify the contact(s) in the jurisdictions throughout Pinellas County. Additionally, contacts are listed for the surrounding counties, State governmental agencies and Federal government for further information and requests for flood related materials such as publications and maps. For convenience, website addresses are listed for those jurisdictions and other governmental agencies that have created webpages and links to various departments and staff, or provide flood-related or mitigation information.

## **TROPICAL CYCLONES**

A tropical cyclone is a warm-core, non-frontal low pressure system which exhibits synchronized characteristics on a large scale. The storm develops over tropical or subtropical waters and has a definite organized surface circulation. The term tropical cyclone is a generic phrase, which covers tropical disturbances, tropical depressions, tropical storms, and hurricanes.

Tropical cyclones are unpredictable. Although the Tampa Bay area is considered a vulnerable location, the area has not received a direct hit from a major hurricane since 1921. However, that doesn't mean that Pinellas County hasn't been hit by hurricanes. In 1848 the County was hit by two major hurricanes that were within a month from one another. The first occurred on September 25th. The storm's track was northerly along the west coast of Florida with the eye slightly offshore. Storm surge was estimated at 15 feet. The effects of the storm created Stump Pass, Casey's Pass, New Pass and Longboat Inlet to the south of the Tampa Bay area. Locally, all barrier islands were inundated. The Egmont Key lighthouse, which at the time was the first and stood at 120 feet tall and was made of concrete and brick, was undermined which led to the construction of the lighthouse currently on the island. Shell Key, Summer Resort Key and other smaller barrier islands were altered. The North Channel at Pass-A-Grill and South Channel, south of Shell Key was altered. Tierra Verde was split, forming two islands. John's Pass was created during this storm. Then about three weeks later, the second major hurricane hit. On October 16, 1848, the hurricane hit the Pinellas County area with a storm surge of about 12 feet. Again, all of the barrier islands, including Egmont Key were completely inundated. The hurricane greatly affected a hog farm on Sand Island, later changed to Hog Island, which later became Honeymoon Island (today).

In 1985, Hurricane Elena, a Category 3 hurricane, spun 90 miles offshore of Pinellas over Labor Day Weekend. As it looped offshore, Elena sent high winds, rain and heavy surf that created a 7-foot tidal surge and severe erosion along the beaches. Mandatory evacuations were issued. Then in March, 1993, a winter "Storm of the Century" hit the County with high winds, rain and a tidal surge that flooded low-lying areas. Tropical Storm Josephine came by in 1996 with a high storm surge that also flooded the low-lying areas of the County. Tropical Storm Harvey, 1999, was headed straight for Tampa Bay from the Gulf when it took a sudden turn to the south during the night and made landfall in the Ft. Myers/Naples area. In 2000, Hurricane Georges was sliding up the west coast of the State as a Category 2 hurricane. The track, however, changed from north to the Tampa Bay area to northwest, which kept the storm from creating serious flooding and damages to Pinellas County. This was the last storm where the County issued an evacuation of Level "A" areas until 2004.

The 2004 Hurricane Season was an unprecedented season for Florida as we were hit with 4 major hurricanes (Charley, Frances, Ivan, and Jeanne), three of which affected the Tampa Bay area over the span of six weeks. Pinellas County received a Presidential Disaster Declaration for two of those hurricanes, Frances and Jeanne. As a Category 3 and 4 storm, Hurricane Charley was on track to make landfall in Tampa Bay (with less than 6 hours to landfall), but took a right turn and made landfall in Charlotte County. Frances and Jeanne did the greatest damages within Pinellas County from heavy rains and tropical force winds even though these were exiting storms. Mandatory Hurricane Evacuation Levels "A-C" were called for Hurricane Charley and Level "A" for Hurricanes Frances and Jeanne.

History teaches that a lack of hurricane awareness and preparation are common threads among all major hurricane disasters. By knowing your vulnerability and what actions you should take, you can reduce the effects of a hurricane disaster. This Flood Information Reference Guide serves as a tool for you in preparing for a hurricane and for mitigating the effects from tropical cyclones and heavy rain or weather events such

as flooding and wind damage.

**Hurricanes and Typhoons:**

Both hurricanes and typhoons are warm-core tropical cyclones in which the maximum sustained surface wind is 74 miles per hour (64 knots) or more. Hurricanes are found in the Atlantic Ocean and eastern Pacific Ocean. A typhoon is a hurricane on the other side of the International Dateline.

**2008 ATLANTIC HURRICANE NAMES:**

Arthur	Bertha	Cristobal	Dolly	Edouard	Fay
Gustav	Hanna	Ike	Josephine	Kyle	Laura
Marco	Nana	Omar	Paloma	Rene	Sally
Teddy	Vicky	Wilfred			

**The Saffir-Simpson Hurricane Scale:**

The Saffir-Simpson Hurricane Scale is a 1-5 rating based on the hurricane's present intensity. This is used to give an estimate of the potential property damage and flooding expected along the coast from a hurricane landfall. Wind speed is the determining factor in the scale, as storm surge values are highly dependent on the slope of the continental shelf in the landfall region. For the purposes of this Scale, all winds were measured using the U.S. 1-minute average, meaning that the winds speeds are measured and averaged over a period of one minute. The following table incorporates the Saffir-Simpson Hurricane Scale to compare each of the tropical cyclones and the possible damages expected as a result of the increasingly intensity of a storm.

Flooding will occur from wind-driven waters and the rising waters from the hurricane storm surge. A storm surge is an abnormal rise in sea level 50 to 100 miles wide that sweeps across the coast near where the eye of accompanying a hurricane or other intense storm makes landfall. The storm surge height is measured as the difference between the observed level of the sea surface during the storm and the level that would have occurred in the absence of the tropical cyclone. Storm surge is usually estimated by subtracting the normal or astronomic tide from the observed storm tide. In addition, waves on top of the storm surge will create an even greater high-water mark and increase the storm's devastation. Therefore, the storm surge is the greatest threat to life and property. Most hurricane-related deaths are caused by drowning.

Coastal flooding from tropical cyclones is not the only destructive flood waters. Tropical cyclones can produce widespread torrential rains often in excess of ten inches in a relatively short period of time. A nearly stationary or slow moving storm will bring in very heavy rains which are capable of producing destructive floods. These floods can be a major threat to areas that are not only considered to be coastal, but also areas that are well inland.

## TROPICAL CYCLONE COMPARISON

### INCORPORATING THE SAFFIR-SIMPSON HURRICANE SCALE

Storm Classification	Winds (mph/k)	Storm Surge (feet)	Predicted Damage	Comments / Possible Damages
<b>Tropical Disturbance</b>	-	-	<b>Minimal</b>	A discrete tropical weather system of apparently organized convection; generally 100 to 300 miles in diameter; originating in the tropics or subtropics, having a nonfrontal migratory character, and maintaining its identity for 24 hours or more. It may or may not be associated with a detectable blob of thunderstorms. The Hurricane Hunters may fly a "low-level investigative mission" on a tropical disturbance to see if the winds are forming a "closed circulation", which means it is reaching the next stage of development, the tropical depression.
<b>Tropical Depression</b>	< 38 / 33	-	<b>Minimal</b>	The storm exhibits a closed circulation pattern. At this point, the storm gets a cyclone number, starting with "TD01" at the beginning of each storm season.
<b>Tropical Storm</b>	39 - 73 / 34 - 63	< 4	<b>Minimal</b>	In this stage of development, the cyclone gets a name. In the Atlantic/Caribbean/Gulf of Mexico basin, the names start with "A" each season. Locally, TS Josephine, 1986, had tropical storm winds and a 6' storm surge.
<b>Hurricane Category 1</b>	74 - 95 / 64 - 82	4 - 5	<b>Minimal</b>	Damage is primarily to shrubbery, trees, foliage, and unanchored manufactured homes. No real damage to other structures. Some damage to poorly constructed signs. Low-lying coastal areas and roads will be inundated. Also, minor pier damage, some small craft in exposed anchorage torn from moorings. Hurricane Gladys, 1968, made landfall at Homosassa Springs with minimal hurricane winds and a 5' storm surge in Pinellas County.
<b>Hurricane Category 2</b>	96 - 110 / 83 - 95	6 - 8	<b>Moderate</b>	Storm damages may include some roofing material, door, and window damage of buildings. Considerable damage to shrubbery and trees with some trees blown down. Major damage to mobile homes, poorly constructed signs, and piers. Evacuation on coastal and low-lying areas required. Coastal and low-lying escape routes flood 2-4 hours before arrival of the hurricane center. Marinas flood. Small craft in unprotected anchorages break moorings. In 1966, Hurricane Alma paralleled the Pinellas County coast 50 miles off-shore with 90 mph winds in the County and creating a storm surge up to 10'.

<p><b>Hurricane Category 3</b></p>	<p><b>111 - 130 / 96 - 113</b></p>	<p><b>9 - 12</b></p>	<p><b>Extensive</b></p>	<p>Damage to shrubbery and trees with foliage torn off trees and large trees blown down. Mobile homes and poorly constructed signs are destroyed. Some structural damage to small residences and utility buildings with damages to roofing, windows and doors. Flooding near the coast destroys smaller structures with larger structures damaged by battering from floating debris. Evacuation of low-lying residences with several blocks of the shoreline may be required. Low-lying escape routes are cut by rising water 3-5 hours before arrival of the center of the hurricane. Terrain continuously lower than 5 ft above mean sea level may be flooded inland 8 miles or more. Hurricane Opal, 1995, created high winds and a storm surge of 4' locally. Although 90 miles off-shore, Hurricane Elena, 1985, caused heavy beach erosion and a 7' storm surge in Pinellas County.</p>
<p><b>Hurricane Category 4</b></p>	<p><b>131 - 155/ 114 - 113</b></p>	<p><b>13 - 18</b></p>	<p><b>Extreme</b></p>	<p>Shrubs, trees, and all signs are blown down. Extensive window and door damages with some complete roof structure failures on small residences. Complete destruction of mobile homes. Major flood damage to lower floors of structures near the shore. Low-lying escape routes may be cut by rising water 3-5 hours before arrival of the center of the hurricane. Terrain lower than 10 ft above sea level may be flooded requiring massive evacuation of residential areas as far inland as 2 miles. The 1921 Hurricane which made landfall in northern Pinellas/southern Pasco had winds of 104 mph and a storm surge of 7'. The storm split Honeymoon Island into two, creating Hurricane Pass, Dunedin, and forming Caladesi Island.</p>
<p><b>Hurricane Category 5</b></p>	<p><b>&gt; 155 &gt; 135</b></p>	<p><b>&gt; 18</b></p>	<p><b>Catastrophic</b></p>	<p>All shrubs, trees, and signs blown down. Complete destruction of mobile homes. Complete roof failure on many residences and industrial buildings. Severe and extensive window and door damage as glass shatters. Some complete building failures. Small utility buildings blown over or away. Major damage to lower floors of all structures &lt; 15' above sea level with 500 yards of shore. Low-lying escape routes are cut by rising water 3-5 hours before arrival of the center of the hurricane. Massive evacuation of residential areas on low ground within 5-10 miles of the shoreline may be required. In 1969 Hurricane Camille hit Mississippi with winds of 200 mph and a 24' storm surge. It has been ranked as the second most intense hurricane to hit the U.S. and the fifth most expensive U.S. hurricane. Hurricane Andrew, 1992, came ashore in Dade County with 165 mph winds and a 17' storm surge. It has been ranked as the third most intense hurricane to hit the U.S. and the first most expensive U.S. hurricane.</p>

- 1) **To obtain more information about Flood Insurance Rate Maps (FIRM), Flood Boundary and Floodway Maps for a specific community (a nominal fee may be charged):**

Federal Emergency Management Agency / NFIP

Map Service Center

P. O. Box 1038

Jessup, MD 20794-1038

(800) 358-9616 or fax: (800) 358-9620

Hours: 8 am to 8 pm, EST, Monday through Friday

If possible, have specific the panel number found on the map and the community number available (please see attached list for community numbers; for unincorporated Pinellas County - Community No. 125139). **Fees** start at \$3.00 per paper map or digital maps on CD; \$2.50 per downloaded FIRM; and \$6.00 and up for flood studies. Plus shipping and handling charges. Prices are as of February 2006.

FEMA Map Assistance Center (information about flood hazard maps and **map changes**)  
(887) 336-2627

Information is also available on the Internet at: [www.fema.gov/maps/](http://www.fema.gov/maps/)

Information regarding LOMA's and LOMA-F's is available on-line. Tutorials with helpful tips and links, and interactive forms available for downloading can be found at:  
[www.fema.gov/mit/fhm/ot\\_lmreg.shtm](http://www.fema.gov/mit/fhm/ot_lmreg.shtm)

Past FIRM information may be located with Federal Emergency Management Agency (FEMA) Technical Evaluation Contractors at Dewberry & Davis (703) 849-0100 or on the Internet at: [www.Dewberry.com](http://www.Dewberry.com)

**For information about the Flood Insurance Rate Maps for the unincorporated areas of Pinellas County:**

Pinellas County Building & Development Review Services

310 Court Street

Clearwater, FL 33756

(727) 464-3471

[www.pinellascounty.org](http://www.pinellascounty.org)

Please have the 18-digit parcel Identification Number for the property.

**\*\* Flood Zone Map Information (FLOOD INSURANCE RATE MAP'S OR FIRM'S) FOR ALL OF PINELLAS COUNTY ONLY ARE NOW AVAILABLE ONLINE ON THE PINELLAS COUNTY WEBSITE. GO TO:**

**[WWW.PINELLASCOUNTY.ORG](http://WWW.PINELLASCOUNTY.ORG)**

**CLICK ON “INTERACTIVE MAPS - GIS” UNDER “MULTIMEDIA & MAPS” ON THE LEFT-HAND SIDE OF THE HOME PAGE SCREEN. NEXT, CLICK ON FLOOD INSURANCE RATE MAPS. THE DIGITAL FIRM'S ARE NOT OFFICIAL FEMA FLOOD ZONE MAPS. THEY DO, HOWEVER, PROVIDE GENERAL FLOOD ZONE INFORMATION. ALSO, THESE MAPS DO NOT NECESSARILY IDENTIFY ALL AREAS SUBJECT TO FLOODING, PARTICULARLY FROM SMALL LOCAL DRAINAGE SOURCES. NOT ALL FLOODWAYS ARE SHOWN TO SCALE. CONSULT THE FLOOD INSURANCE STUDY REPORT FOR PINELLAS COUNTY FOR FLOODWAY WIDTHS. ALSO, THE HURRICANE EVACUATION MAP CAN BE ACCESSED FROM THIS WEBSITE. YOU CAN LOOK UP YOUR SPECIFIC EVACUATION LEVEL.**

**2) For questions about the National Flood Insurance Program (NFIP):**

Federal Emergency Management Agency  
Region IV  
3003 Chamblee Tucker Road  
Atlanta, GA 30341  
Telephone: (770) 220-5400  
Fax: (770) 220-5230  
FEMA World Wide Web Site:

[www.fema.gov](http://www.fema.gov)

Federal Emergency Management Agency National Flood Insurance Program (NFIP):  
For general flood information: (800) 427-4661  
For lender questions on flood policy coverage and rates: (800) 611-6125  
For insurance agent questions on policy coverage and rates: (800) 720-1093

FEMA 's NFIP Website: [www.FLOODSMART.GOV](http://www.FLOODSMART.GOV)

This site provides information on preparing homes for flooding, tools for assessing flood risk and estimating flood insurance rates, and listings of local flood insurance agents, and information on types of flood policies, coverage, terms, and costs, including 10 questions to ask your flood insurance agent.

NFIP Forms and FEMA Publications:

FEMA Distribution Center  
P.O. Box 2012  
Jessup, MD 20794-2012  
Telephone: (800) 480-2520  
Fax: (301) 497-6378

Some publications are available from the FEMA website at: [www.fema.gov](http://www.fema.gov)

Other sources of publications and information include:

**9) Post-Disaster Recovery:**

FEDERAL EMERGENCY MANAGEMENT AGENCY, FEMA [www.fema.gov](http://www.fema.gov)

First check to see if the County has been designated for assistance following recent disaster and emergency declarations. If so, check online for Recovery Information and Register for Disaster Assistance Online or call: (800) 621-FEMA (3362)

FEMA's website has online links for "FEMA: The Disaster Assistance Process for Individuals". Download or view the booklet "*Help After a Disaster: Applicant's Guide to the Individuals & Households Program*".

DISASTER CONTRACTORS NETWORK. [www.dcnonline.org](http://www.dcnonline.org)

This organization can be used by homeowners and contractors. This site can help confirm or check the status of a contractor's state license, provide updates on the availability of building materials, and provide advice on home and business repairs. Homeowner information on the site can assist in hiring a contractor, rebuild after a storm, check to see if a contractor is licensed in the state of Florida ([www.myfloridalicense.com](http://www.myfloridalicense.com)), provide information on roofing, and provide tips for filing flood insurance claims.

Also, this Network provides contractors with information and resources needed to help customers successfully repair or rebuild their home after a disaster. Contractors can post their critical needs or the availability for labor, equipment or materials. The site creates a database for materials and labor, and assists in locating loans for businesses. Also the Network can assist businesses in creating disaster strategies that will limit losses and help companies recover to get back to normal business.

**10) For other information:**

FLASH: Federal Alliance for Safe Homes [www.flash.org](http://www.flash.org)  
FLASH, Inc. is a non-profit, 501(c)3 organization dedicated to promoting disaster safety and property loss mitigation. This organization promotes life safety, property protection and economic well-being by strengthening homes and safeguarding families from natural and manmade disasters. The website offers considerable information on how to fortify and protect your home from wind and flood damage.

**PINELLAS COUNTY CONSUMER PROTECTION -**

For tips on the following: hiring a competent, licensed contractors for construction and home repairs (also contact the Pinellas County Construction Licensing Board, PCCLB); charitable solicitations; price gouging during a State of Local Emergency; insurance claim adjusters for hire; and motor vehicle repairs. The Pinellas County Consumer Protection and PCCLB websites can be found at: [www.pinellascounty.org](http://www.pinellascounty.org) On the right hand side of the screen under the "Special Interests" heading, click on "Departments". Then click on Consumer Protection or Construction Licensing Board.

Pinellas County Consumer Protection  
15251 Roosevelt Boulevard, Suite 209  
Clearwater, FL 33760  
Telephone: (727) 464-6200

Pinellas County Construction Licensing Board  
11701 Belcher Road, Suite 102  
Largo, FL 33773  
Telephone: (727) 536-4720

The State of Florida has recently developed the Florida Wind Insurance Incentives Web Site. This web site allows Florida homeowners and builders to search for wind insurance incentives that are available for building features that reduce damage during high wind events like hurricanes. Building features that reduce wind damage include improved roof shingles, strong roof decks, hurricane clips/straps, impact resistant glazing or shutter protection for windows, roof shape and other construction techniques. This project resulted from the amendments to the Florida Building Code to require insurance companies to offer insurance rate adjustments for the new code and requirements.
