

The Wonder of the Water Cycle

It Never Ends!

escynore

Match them up!
 Read about the parts of the water cycle below. Then write the correct number in the waterdrops beside the **key words** in the picture.

- 1 Water is heated by the sun. The water changes to vapor and rises into the air.
- 2 As it cools, the vapor turns into tiny water droplets. These join together in the sky to make clouds.
- 3 When the clouds can't hold any more water, it falls to the Earth as rain or snow.
- 4 Some water runs on top of the ground and then into lakes, streams, rivers and oceans.
- 5 Water that goes underground is stored in layers of soil and rock known as an aquifer.

For more water fun,
 UNSCRAMBLE the letters in the large cloud above to find out how you can help save your water supply.
