

Visual Preference Survey Results

Attendees were requested to rank each of the following images of bridge elements based on their individual preference. Each image was judged on its own merit and not compared with other images. A scoring system of 1 through 5 was used where 1 represents a strong dislike and a 5 represents a strong preference.

The total number of marks for each scoring box is shown below and the highest number for each image is indicated with a red square around the box. This information will be used by the project team to develop conceptual architectural details for the bridge alternatives that will be carried forward for detailed analysis and presented to the public at an Alternatives Public Workshop later in the study.
