

Volunteer Opportunities

Position:	Water Sample Volunteer
Department:	Utilities
Duties:	Participate in special projects for lab clients and for the Water Research Foundation. Learn to use and calibrate field equipment to measure field parameters from drinking water distribution systems, lakes and streams, groundwater monitor wells, and cooling towers. Other activities include preparation of sampling kits, and assembly and installation of field equipment for special projects. Assistance with sampling for Water Research Foundation projects helps to increase knowledge of water quality in drinking water distribution systems, source waters, and reclaimed water.
Location:	Based out of Logan Pump Station 1620 Ridge Road, Building B Largo 33778
Map:	gmap 
Schedule:	Flexible
Additional Information:	Prefer volunteer experienced with measurement of field parameters and sample collection. Should also be capable of working independently after a brief training period. The work is mostly outdoors and accomplished in fair weather. A small motor boat is used when sampling lakes. Travel throughout the county.
Facility Operating Hours:
